

Pressrelease 25th April 2017

## Use the same pail with two different easy-to-open lids and create cost efficiency – **Decoline™** – new from Emballator Metal Group

Now, we can offer two different kind of lids for our new series – Decoline™ – a metal pail in sizes from 2,5L to 10L. Both are incredibly easy to open and re-close, at the same time providing safe closure without leakage. Besides the smart function, the Decoline™ also means a cost-efficient solution since the same pail can be combined with different lids.

We constantly want to exceed our customers' expectations regarding service, quality and innovations. 'Product development is a strong focus area at Emballator. That makes us proud when presenting our latest line – Decoline™ – with associated lids in two different models', says Henric Wiklund, Group Commercial Director Emballator Metal Group. The pail is light and has a specially designed profile which maximises emptying of paint residues and minimises waste when re-closing. There are two different kind of lids that suits the Decoline™ pail. One is a simple model which is easy and effortless to open and re-close. We call it **Xpress™**.

The other one – **EasyFlex™** – is an exclusive lid that combines a tinplate center with a plastic ring folded over the edge of the pail. Opening and re-closing is managed without using any tool at all. The construction is unique, patented and price awarded.

Both lids are designed with an optimal production function. Besides being easy to re-close, having an elegant design, they improve palletizing stability. We present them more thoroughly at our stand on the Interpack Trade Fair in Düsseldorf Germany the 4th -10th May.

Emballator Metal Group manufacture cans from tinplate which is a durable and hygienic choice of material and 100 percent recyclable. Our metal packaging fulfils strict safety requirements and offers the opportunity to create spectacular designs that boost sales.
